Drawings In AutoCAD, a drawing is the representation of a 3D object. A drawing consists of a group of layers that can be hidden or shown, and each layer contains 2D objects, like lines or rectangles, or 3D objects, like a plane or a box. Edit toolbar The Edit toolbar contains various editing tools. They are divided into groups, for instance the Align group contains tools to align one or several objects. Z-levels The Z-levels in AutoCAD are the different levels of the rendering. In AutoCAD, there are five main levels of rendering: In a single layer drawings, surfaces are rendered at a single level of the depth. In a multi-layer drawings, surfaces are rendered at specific Z-level, (typically 0-1 for single-layer drawings, 0-1-2 for two-layer drawings, etc). When the plotting window is activated, the screen is automatically set to single-layer mode. Thus, the first Z-level set is 0. When the rendering is activated, a list with the available levels is displayed on the status bar. When the ribbon is closed, the list of the available levels is shown on the status bar, and also in the multi-layer dialog. You can change the current drawing Z-levels by choosing the required Z-levels from the ribbon's rendering tools. You can also change the current view or the current setting with the various view buttons (for instance, the slider and the buttons for the free space (Z-level 0), the actual Z-levels (Z-level 1 to Z-level max), or the current Z-level). Other Z-level tools are accessible from the Zoom menu: Framed view A framed view allows one to temporarily switch to 2D mode by hiding the 3D representation of the geometry in the selected area. a1d647c40b
