Be2Works 2.84 full (Cebu) update. Posted by oleggrch Â» Mon, Dec 26, 2011 12:06 PM. Hello. I have full version 2.84 and want to update it to 2.87. What should be done in this case? Do I need to install these updates on different computers and on different file servers? Or is it possible to just upgrade from one of the servers to version 2.87, and then make a backup, and after a success message is received, restore again? If so, where should the backup be kept? And will the update file need to be uploaded to the file servers? Just tell me where to look for the problem. Best regards, oleggrch.
