❓ The first step is to import your own images. - Imported images can be imported as grayscale or RGB color images. - Image sizes can be selected by clicking on the "... " icon on the image bar. - Use the plus (+) button to add more images. ❓ Set a display brightness to simulate an environment that has a lot of light coming in or outside the window. - Use the slider and the +/- icons to increase or decrease the display brightness. - Set your screen

resolution. - Choose between "XGA" (1024x768) and "SXGA" (1280x1024). - The "SXGA" resolution allows for more pixels per inch (ppi) for crisper images. - Click on the "..." icon to select a background color. [?] Examine the image when the user is ready. - View a preview of the image before saving it. - Click "Save" to save the image to your hard drive. [?] If the image is not displayed correctly, click on "Display Settings" to see if the problem has been addressed. - Optionally, the test pattern can be

displayed to better examine the image. - The image will automatically start to move on the screen, so that you can view it from a wider range of angles. - Click "Next" to go on to the next test pattern. [?] Display a list of available patterns. - There are a total of 8 test patterns: - 8 Bit Grayscale Linear (YMC) - 8 Bit Grayscale Linear Gradient - 8 Bit Grayscale Linear + Grayscale Linear Gradient - 8 Bit Grayscale Linear + 8 Bit Grayscale Linear Gradient - 8 Bit RGB Linear - 8 Bit RGB Linear Gradient - 8 Bit

J. Cole – “Sociopath” J. Cole’s forthcoming sophomore album, *2014 Forest Hills Drive*, features a lot of guests that help make it unique. One of those is Breezy. Breezy joins Cole on the gorgeous “Sociopath,” one of many standout

tracks on the album. J. Cole has worked with some of the best, including Mike WiLL, J. Cole and No I.D.. He's also been on some of the best, including T.I., Wale and Nas. "Sociopath" is one of his best singles. You can download it via iTunes or at J. Cole's website.

[youtube the packaging of products, one of the last aspects of the product to be tested is the packaging, itself. This typically means that some level of redundancy is built into the packaging design to ensure that the

package is constructed and survives in the level of handling and storage expected. It is sometimes possible that product will reach the customer in less than the time and in the form in which it was designed and intended. In such situations, some level of damage to the packaging is expected. In many cases, it is not at all a problem when the packaging is damaged so long as the packaging is still serviceable, i.e., the product or part of the product (e.g., a blister card) is still present in the packaging and is still operative.

However, there are certain products that do not tolerate such damage and/or are not considered viable if the product is damaged
