2007-09-01 AutoCAD 2007 adds a feature called Action Sets, which make it possible to group a set of steps for automation into one call for user input, allowing for automation and re-use of complex commands. Action sets allow for unlimited levels of hierarchy.

AutoCAD Feature (FEAT)
AutoCAD Feature is a set of "object definitions" that provide the basis for creating an "object". It does not replace the "Object"

command, however, it does provide more detailed control over object creation and modification. Object definitions may be created using any of AutoCAD's many object definition editors. The following are just some examples of object definitions that can be used to create common objects. Units and Dimensions Dimension objects AutoCAD dimension objects, such as the DIMLINE, DIMARC, DIMRECT and DIMTRI objects can be used to create orthogonal, parallel, arc and triangular objects.

Measures and Models Measure objects Measures are used to create objects with dimensions, properties and values. They are used to represent quantities in the current drawing. Measure objects such as the MEASURE, MEASURE3D and MEASUREVALUE objects are used to create objects with their own properties, such as the value, dimensions and location. Models AutoCAD models are used to create 3D objects in a 2D drawing. They represent 3D objects in a 2D drawing. A model may consist of a

set of polylines. Models can be imported into AutoCAD from third-party CAD programs such as OpenSCAD. Trades and Drafting Trades and Drafting includes the following commands. Trades and cuts Trades are used to specify the connection or disconnection

the release of the Nintendo Switch Lite is something that are making their rounds in the market. While these rumors might seem strange, we have to remember that the switch was first introduced in 2017 and it only received an update for the Nintendo Switch Lite in March, 2019. In this way, it wouldn't be a surprise for Nintendo to be planning for a Switch Lite 2.0. This would explain why we haven't seen any updates to the Nintendo Switch yet. What's more, Nintendo recently created a new division called "All-

Star Games” and we’ve already heard rumors of a game like Pokemon Sword and Shield coming to the Nintendo Switch, so this could be the hint we’re waiting for, considering that the switch would be a hot seller since its launch. In fact, according to ResetEra user, “Nikkei”, a new Nintendo Switch console could release as soon as late-2020 or early 2021. This would mean that it could be around the time when the Nintendo Switch 2.0 would be released as a new hardware. Also, this user is the

person who leaked the “All-Star Games” name to the public, and that has caused some controversy around the internet. You can find some information about this user in ResetEra and in his Twitter, which are summarized below. He leaked the "All-Star Games" name to the
