Effects of ovarian hormones on psychosexual development of female rats. The aim of the present paper was to review available data on the effects of ovarian hormones on psychosexual development of the female rat. A review of the data obtained in a number of studies conducted in our laboratory was performed. The analyses were focused on the effects of ovarian hormones on the onset of puberty, sexual behavior, gonadal function and the brain's monoaminergic systems in immature and adult females. The evidence suggests that ovarian hormones in their various forms influence the timing of the appearance of the first positive reaction of lordosis and mounting in adult females. Other behavioral and physiological phenomena observed, such as running wheel activity and the appearance of the first estrus, are also influenced by ovarian hormones. The present paper is focused on the behavioral aspects of sex development. The substantial improvement in the understanding of the role of ovarian hormones in the development of psychosexual behavior and function in the female rat is therefore discussed. Sorption of iron(III) and arsenic(V) on coal fly ash. The effect of fly ash matrix properties on the sorption of Fe(III) and As(V) on ash particles was investigated. As-sorbed ash and Fe(III)-As(V)-sorbed ash samples were characterized and compared. The sorption experiments were conducted as a function of initial pH and the amount of sorbent in a batch sorption system. The distribution coefficient for arsenic ($K_d(\text{m-As})$) was higher than that of iron ($K_d(\text{m-Fe})$). The results indicate that fly ash matrix has strong effects on the sorption of Fe(III) and As(V), and that the sorbed Fe and As showed different sorption behavior. This study reveals the importance of a knowledge of the sor

In this post, we'll show you a simple way to generate random numbers in a specified range, and keep track of generated numbers, too. What is Random Number Generator? Random Number Generator (RNG) is a software tool for generating random numbers. There are a lot of public sources of random numbers, such as websites that generate random numbers based on calculations, but here we'll use the built-in function of Windows operating systems.
