How do I make the function trigger only on certain keys? I'm looking for a simple plugin that will make the onTextArea.keypress function only trigger when the key pressed is on my "INPUT" word. I've searched for a plugin, but i can't find anything that will just trigger only when the input word is hit (not any letters in between). Does anyone know a plugin like this? A: There is no such thing as "only when", but it is possible to check if a certain key was pressed and ignore everything else. To do this you should just bind an on keypress listener to your text area: $('#some-text-area').on('keypress', function(e){ if (e.which == 13){ //do some stuff } }) Q: Git: Committing for nested create with ignoring merge issue

The program will not add it to the list of installed programs. Adding PE to the registry entry in HKLM\Software\Wow6432Node\Microsoft\Windows\CurrentVersion\Uninstall does not make any difference. What should I try to run it to check whether it really is a program or just a graphical user interface(GUI) of some type I am not aware of? Any help is greatly appreciated. A: The program is called PCUnlocker. It's a tool from unidroid to enable and disable Microsoft Software Protection on Windows 8.x and Windows 10. Download it from this link or use the link below: This is a 32bit version and you need to download it and unzip it if you need a 64bit version. Do this: Unzip the file. Move it to where you can find it. Run this command as admin: xcopy "C:\Path\To\Unzip\File" C:\Path\To\PCUnlocker\ Open the program. Click on the 'Create Shortcut Button'. A new shortcut to PCUnlocker will be created. Click on the newly created shortcut. You should now see a new icon on your desktop. It should open the pcunlocker.exe from the unzipped folder. The version I have is 4.6.0. Now you should be able to disable/enable SSP. Q: How to calculate the monthly interest? I am working on an assignment and have come up with the following question. I am stuck at the last step of the solution. Here is my question and solution: The monthly payments to a $50,000 loan of $9,590 at an annual rate of $9,360 are to be $417.80. Use decimal intervals to calculate the interest in the first month. Solution: $50,000 = $9,590.00 $9,590 x 12 = $110,520.00 Rearrange the first equation to get the following formula: $50,000 = $9,590.00 $50,000 = ($9,590.00) - 9,590.00 $50,000 - 9,590 = $40
