Thank you for your help and your time.

Ascorbic acid inhibits astrocytic calcium increase caused by glutamate or NMDA in cultured neurons. We studied the effect of ascorbic acid on astrocytic Ca²⁺ increase in astrocytes cultured on polylysine-coated glass coverslips and loaded with fura-2. Superfusion of the cells with glutamate (5 mM), kainate (5 mM), NMDA (1 mM) or QX-314 (0.5 mM) did not result in a significant elevation of cytosolic Ca²⁺ [Ca²⁺]_i. Pre-incubation of the cells with ascorbic acid (0.25-2 mM) for 30 min followed by superfusion with

glutamate or NMDA caused a significant decrease in the amplitude of the increase in $[Ca$

Nero 8 Ultimate Edition (6.0.8.0) Retail | Customer Support & Tutorials | Nero “ Learn more “ .Association of 5'-nitro-5'-sulfonated deoxyribonucleosides with DNA in rat aorta and kidney. 5'-Nitro-5'-sulfonated deoxyribonucleosides were found to be incorporated into DNA of rat aorta and kidney, in response to injection of a single dose of 2-hydroxy-3-amino-1,4-N6-piperidino-6-N-methylcarbamoyl-dideoxyadenosine (SQNH2). The highest concentration of the derivatives was found in kidney and in aorta 8 to 14 days after injection. In kidney homogenate there was a linear correlation between the quantity of SQNH2-derivatives and the dosage given. In the case of aorta, however, the amount of derivatives was not proportional to the quantity injected. After reduction of the highest concentration of SQNH2-derivatives found in aorta and kidney, the lowest concentration appeared within 30 min.
