The popularity of AutoCAD has increased since the launch of the mobile app. While the basic AutoCAD package remains the same, the new mobile app offers features such as the ability to work offline and export to various file formats. The AutoCAD Mobile App also allows users to connect to a network with one click of a button, giving them access to additional work spaces with their colleagues. AutoCAD Mobile App can also be used to connect to an AutoCAD server, allowing work files to be stored on a server and accessed remotely. AutoCAD is considered to be the most complete, robust, and best-selling commercial CAD application on the market today. The full version of AutoCAD is available on both PC and Mac. We use AutoCAD for designing a wide range of products, including bridges, tunnels, and pipelines. It is also very popular with engineers and architects. It should be noted that although AutoCAD is for professional use only, the basic version of AutoCAD is free to use for any purpose, including personal and academic use. The AutoCAD Mobile App, however, is also free to use. There are many reasons why AutoCAD is so popular. The main reason is that AutoCAD is fully functional and very user-friendly. When you design a large-scale project such as a tunnel, it is likely that you will need to do some preliminary work in a preliminary design phase before starting the full project. While you can do some work with AutoCAD on a PC, the real benefits come from using the mobile version of the application. AutoCAD mobile allows you to work on projects using your smartphone or tablet computer, as long as you have a Wi-Fi connection. You can then load your work into the full version of AutoCAD or other CAD programs to continue your work on the project. With the AutoCAD Mobile App you will be able to draw, modify, and annotate drawings with only a few taps of your finger. There is also the ability to read annotations on drawings, even if they are not saved on your device. This makes the AutoCAD Mobile App very useful, particularly when you are on location with no access to your PC. You can work using your smartphone or tablet computer, and save your work as an Excel file. When you return home, you can upload your work to the cloud and continue the work on your PC.

AutoCAD's component library includes all the important core functionality to the drawing environment, including commands, dialogs, templates, and components. A number of third-party vendors have also developed plugins for AutoCAD, including Filmmagic, LANL, SmartDraw, Softimage, and others. Features The fundamental features of AutoCAD are the following: 2D/3D drawing, modeling and 2D drafting Geometric modeling, transformations, and 2D/3D assembly Layouts, piping, and printing Electrical engineering, Mechanical engineering, Civil engineering, and construction management. CAD models can be easily transported to other CAD packages via R12 file format or portable. Integrated object information management CAD models can be saved to and opened from many file formats. The data can be moved to a CAD package using the DWG or DXF format. AutoCAD is currently available in three editions: Standard, Professional, and Architectural. AutoCAD 2010 AutoCAD 2010 is the latest major release. Improvements included enhanced BIM connectivity and cloud compatibility, improved designer workflow, multi-touch (including Windows 7 touch), up to 52 percent performance improvement, and a new cloud-based applications (the standard version includes a cloud storage service). AutoCAD 2010 has a new multi-view paradigm that allows the user to view the project from any orientation. The user can switch between 2D and 3D views to compare changes and see if the model needs to be redrawn. AutoCAD 2010 has a feature called Linked Views, which allows moving entities, or parts of a model, between two models, creating a link between them. Linked views also works between two models that have overlapping viewports. AutoCAD 2010 includes a new collaborative model, allowing multiple people to work simultaneously on the same model. AutoCAD 2010 also has an improved modeling environment, with a new surface editor, improved surface editing tools, improved surface constraints, and an improved ribbons and menus. AutoCAD 2010 supports 3D printing. While it still does not support all 3D printing methods, it is able to export.stl files compatible with most 3D printers. AutoCAD Architecture 2010 includes new features such as 2D Wall plane and dimension editing and improved Interfacing and BIM controls. A new 3D Warehouse for CAD/CAM in the cloud is included. Save Article The Briefs: - Free Beer to Buy? PepsiCo's (PEP) Gatorade can top \$2 a gallon. But don't get used to the price. "The \$2 price represents a significant growth in P&G's revenue," said Raymond James analyst Donaldson Lufkin Jenrette. "But it's not going to continue." Sales at Gatorade, the world's biggest beverage, are up 13% for the first quarter. But that was partly because prices are rising. The company has raised prices on some products by as much as 6% and is giving store coupons and rebates to consumers. That's turning off Pepsi's most loyal customers. One-third of Gatorade's sales now come from outside North America. But U.S. consumers have made up the difference and are driving the sales gains. "I don't think they can continue to ignore the U.S. market," said Donaldson. "It's very important." - Soda Dumpers More than 90% of soft drinks sold in the United States are now from a plant owned by R.J. Reynolds Tobacco Co. "The entire soft drink category is slowly but surely being nationalized," said Duncan McGillivray, a beverage analyst at Sanford C. Bernstein & Co. in New York. Mr. McGillivray said the owner of that plant, Quaker Oats, had previously been a rival for soft drink sales. "Now Quaker Oats has almost become the number one soft drink supplier for Coca-Cola." Quaker Oats (Q) is taking a 6% stake in the cola company for \$390 million, in a deal that values Coca-Cola at about \$15 billion. Both companies are getting bigger and changing the face of the beverage business. Coca-Cola and Pepsi have for years fought over market share by buying each other's brands. Now Coke (KO) is looking for a new source of growth. It is the world's biggest soft drink company, with more than one in four U.S. consumers drinking Coke. Mr. McGillivray said that Mr. Reynolds, in a separate alliance, had set the path for a much more aggressive marketer. "They bought the soft drink business for under \$1 billion," he said. "They just did it very smartly." - The Shrinking
