We all know that Photoshop was created by Adobe to be the professional replacement for Paint. However, since Photoshop was originally designed for desktop use, it struggles to deliver the sort of results that you get from other image editing software. One of the things that helped make the PS workflow easy and enjoyable to me was the fact that I could quickly upload images to the tablet and get my retouching done on the go. It would have been nice, however, if there was something like an "Auto Upload" option – probably a few lines of code – that would make sure that my images would be updated as soon as they're finished. I also enjoy the look of my layered PSD file, especially when it's rendered to a PDF (PSD to PDF). That's a feature that is present in Lightroom, but the PDF is smaller in size and doesn't look as sharp. So, I'd appreciate an option to render PSD files to PDF, but with higher quality. *Sadly, I came across a number of reviews that indicated that both the image quality and file size were sub-par, which encouraged me to take a closer look.* The main complaint was that the file's save dialog box offers only the "Save as JPEG" option. While this is mostly a good thing, the option of exporting as a TIFF or PDF type sounds like a "must have" feature. When it comes to long detailed reviews, I always appreciate the quick touch ups – like wrinkle removal and blemish removal – with the Hair and Skin tools, but for most people, it will simply never be relevant. However, such features are available in Lightroom, but I personally like to have it in Photoshop as well. That was one reason why I gave Adobe the benefit of the doubt before rating it the way I have. I'm pleased that I reconsidered this decision and included Lightroom's "Correction Brush" in my closing sentence.
