You can import and export images from Lightroom Elements, too, and the same adjustments are applied to each file. So if you are editing a specific image in a particular project, it's best to make whatever changes you want to all at once. If you have a mix of projects open, it's best to close one before performing any edits to the other files in it. The same applies to files in different image libraries. If you have Photoshop files open in a project you are editing, you could save a Version History backup, then close the file. Lightroom Elements can operate in almost any directory, and you can save edits as JPEGs or other formats, so you can have different projects, all open in Lightroom Elements, any change applied to a file automatically reflected in all the other projects in the library. There is no need to export, or import the files, but if you want to change the format of a file, you can. You can also drag and drop from the Lightroom library to the desktop. This works, but you can't have multiple image files open in preview simultaneously if you do that. So, what's left? A lot! Although it lacks Agfa's "film simulation suite," I like some of the quirks on which it is based. Some of the objects on a picture can be moved around, and even changed with a brush—a feature that I feel is currently being shadowed by the artificial transparency and antireflective properties that you can also use in the film simulation tool. This tool should be expanded to provide those effects and some other enhancements besides. One of my unresolved issues, though, is that the transfer rate is slow. Although I am not sure whether this is related to the Idea Exchange, which creates an automatic catalog for you that helps you find images, or the slow performance of the brushes that work on images that are not even locked yet. I believe that moving to an in-memory database and organizing imported images by priority would also improve things, without losing the speed of search and manipulation. And cross-editability is another feature that has not been improved for quite a while. After more than three years of making Lightroom a base for professional design and

photography, I am confident that Adobe has some great ideas that will make an even better digital darkroom. On the other hand, I feel that it is possible to make great improvements and digital darkroom tools that are better than mere imitations of the analog darkroom, but they require the same level of attention and diligence that a real darkroom tool must get.

This is an image of my daughter and nephew. I just cropped out the hat after I took the photo because I just couldn't resist even if they were wearing a white shirt! I still have some of that rolling up in the background so it was a quick and easy way to remove the hat from the image. I don't think my daughter can ever forget that white shirt showing under the hat she was wearing that day. Instead of going through the hassle of going back to prove I took the photo, I just went straight to Photoshop! Learn more about Photoshop tips
