This is a program to list files in a directory, or in subdirectories. It does not work with ZIP archives, or in directories with very large number of files. User can select files with mouse, and can choose to highlight files of a specific type with mouse. Files are displayed in a file list window, and can be selected by name to be opened or copied to another directory. File list window has the following options: Show: all files listed can be shown or hidden Show files starting with: the first five characters of the filename can be selected The list can be sorted ascending or descending New subdirectory window shows files in the directory and optionally, any sub-directories. Files in sub-directories are shown in a list in the main window. All files of the current directory are shown in a list, but you can select any file to be opened. The directory can be changed, and files from other directories can be added to it. One can save the list of selected files, or a copy of the directory. The directory can be saved to the clipboard, and the file list can be pasted to other windows. Separate sub-directories can be shown in a separate window. It is very similar to the built in 'Open File' dialog box in Windows, but includes more features. Program has been tested on Windows XP, 2000, Vista and Windows 7, with any and all versions of the MS Windows operating system. It does not work with Windows 95, 98 or ME. Features: Displays only visible files Displays hidden files List files in subdirectories (with 'New Directory' option) Filters files (e.g. by file type, size, date, time or extension) Exclude files (e.g. regular expressions) Highlight files and directories with mouse Support for file types (e.g. '*.txt') and extensions (e.g. '*.txt') Select any file to be opened, or open the selected file Select a directory to be saved to the clipboard (or paste to another window) Select a directory to be shown in a new window Rearrange files in a list Sort files by ascending or descending order Split files in the directory into a separate window Uses the fastest and most efficient algorithm Simple and easy to use, yet powerful enough to list all files in any directory No support

What's New in the SegDSee?

SegDSee is a lightweight application, aimed at seismologists, designed to help you view headers and seismic data contained in SEG-D and SEG-B files. It features a modern-looking user interface, with easy-to-access functions and a tabbed layout. However, it does not offer any documentation and does not include sample data files. Supports multiple data formats The application supports single shot file and Lacey Tape on Disk (LTOD) encapsulation and can open the following file formats: SEG-D 80XX, 0015 and Standard SEG-B. View seismic data and customize settings You can navigate to a preferred directory and view all the compatible files detected in that folder. The application then displays their name, FFID and type. The main program window features two tabs, for managing headers and channel sets. You can modify the scale of the displayed information by scrolling the mouse wheel or by manually setting traces and time values. Also, you can choose to view all the channel sets or individual ones and select between wiggle, gray and color display modes. SegDSee allows you to choose if the band pass filter should be used, as well as select between automatic gain control (AGC) and normalization. You can also specify the window length. Offers no documentation or sample files SegDSee is a specialized application, aimed to scientists who wish to view and analyze seismic data. However, it would help if some documentation was included, as the program can be difficult to understand for less experienced users. Also, the application does not include any sample files, which would allow users to test it without having access to a seismic data source. Overall, this is a useful application for scientists who need to analyze seismic data stored in SEG-D and SEG-B files. It is aimed at experts working in seismology, but offers no documentation or sample files, making it less accessible for novices.
