If you're an avid photographer, you know how much of a challenge it can be to edit large RAW files while on the go. That's why we've enhanced the overall performance of large RAW files when working with images in ACR (version 11.0). This enables users to edit and process large RAW files faster without the need to shut down and restart the editor. It's still not enough to have a fast processor, though, so we also enhanced our performance testing methodology, to provide even more data than in the past. For example, when up to 63 images are opened at once, we know that's too many and that performance problems are based on the number of open documents. We also added a new feature to track performance and minimize application lag in the iOS version of Photoshop whenever an image-removing command or menu command fails to respond. In addition, we're continuing to refine the Antialiasing performance report, based on the significant amount of information gathered in the last round of tests. Also in Elements, we've made ordering, returning, deleting and defaulting users' favourites' easy. Simply choose the "Favourites" menu and choose one of the options to instantly bring up all of your default, ordered and deleted favourites. You can also go to "Ordered" and "Deleted" to review them. You can even order or delete groups using the new "Lightroom" or "Classic" choices. You can delete folders, too, by selecting them and the "delete" button. The "Default" button is also new, and will default all of the folders in your Favourites list.

Photoshop is a professional image manipulation tool used to retouch and manipulate photographs. It is the flagship product of Adobe Systems and is one of the best-known and most widely used proprietary image editors. What is the best way to teach someone how to use Photoshop? Almost certainly not by showing them how to manipulate a large image. Therefore, instead of just sharing Photoshop tutorials on small images, I'm starting to discuss Photoshop using tiny images that I can share anywhere I want without having to worry about whether or not they need Photoshop to view the tutorial. As for Photoshop, it's a bit of a mixed bag. In addition to the photo and drawing features from the higher end Mac app, including retouching tools and a wide variety of color and gradient-based editing options, Adobe Photoshop has a vast range of creative features. Photoshop is the powerhouse of digital image editing. It has over 20 million registered users and is Adobe's most popular image editor. So, if you look at Photoshop's feature list, you'll see a lot of bullet points and not many explanations. As you'll see below, Lightroom vs Photoshop is less a question of which is best but more a question of what you want to do. They have different purposes and for many photographers and editors it's not a question fo either or - they use both but at different stages of their editing process. Features like the color and swatches tool, layers, masks, adjustment brushes and supporting Adobe Stock are some of the most powerful Photoshop only features. All of these are powerful tools, but may be entirely new to some photographers. e3d0a04c9c
