did anyone notice the slowness of working in the 5.2 version? I'm a designer and suddenly, the work I was doing in 5.1.4 is slower. Same project and for more than a day waiting for the preview to open up the dialog option. After I filed a similar reports in Adobe, I had the answer of the support which said it was a bug and that the number of copies should be set to 1. The answer was that the previews should be off in all previews and this is not the case in 5.2.0

Services tells me that there was a patch to fix this very issue, but it was released after DAWA. I do not have access / privileges to change where I execute Adobe apps, so I am stuck with waiting for this bug to be solved.

This is a big issue for professional users and photographers because the previews are crucial to work with and it is killing my work. Until this is fixed, I'm afraid it is time to say bye-bye to LR 5.2.0 and go back to 5.2.0.5. Along with the changes that were right in front of you, there were a few that were unfamiliar. For instance, there's a beginner tool that lets you create "photocopy" from screenshots and videos. Another new feature, Adobe Layer Comps, allows you to align multiple images or layers to one another, saving the Source Images and Layers. It's a perfect way to quickly combine images and add a background to your work. I also noticed that the software includes the Desert, Sea and Garden Presets as well as the Mobile presets. Ironically, these 3D Studio MAX presets add absolutely nothing to the workflow. I actually hated them back in the day since they took time to load which made the workflow unnecessarily inefficient. Not to mention that the presets added absolutely no speed to my editing process, which is probably the very reason Adobe added them.

The product in 2017 offered a lot of new features, such as the ability to create elaborate designs for mobile and web, as well as easily and quickly retouch multiple images at once. However, despite some of the new common editing features such as auto-reducing photos, the program does lack the advanced non-destructive operations found in newer graphics packages. There are many modifying tools that can help you work within Photoshop, such as the liquify effect, which allows you to manipulate texture. You can also create a thick drop shadow and add a simple white gradient.
