When it comes to Mac, my personal desktop of choice is a Macbook Pro from Apple with a 2.6Ghz Intel Core i5 processor which has 16GB of memory. When I am designing I use OS X Yosemite version 10.10.5. I would recommend having 2GB of RAM for a laptop as I have read that 16GB is not sufficient. The first thing you should consider when thinking about getting a new computer is how high you want to go. If you are simply looking to create then I would recommend getting a laptop that is in between the price range of \$1,500 - \$2000 dollars. If you are while a light weight laptop then the MacBook Air, is very good as it has a price of around \$999. If you are looking to go more towards the professional level, then the MacBook Pro is the better option as it has a price range of over \$1500 dollars. Another thing to consider is the configuration of your laptop as I will explain more below. Before anything, monitor is a must have. I personally like the 32 inch monitor that I have been using on this laptop. Once you have picked out your laptop make sure you are considering what configuration you would like. Again this is an item that is more personal in terms of preferences. The RAM, Processor and speed are all important because these will dictate the speed of the computer. A minimum of 8GB of RAM with a Core i5 processor will be an excellent combination for most situations. If you are looking for a powerful, fast, AND stable system, going for at least 16GB of RAM (core i7) on a laptop is a great decision. e3d0a04c9c

It's a little tough to explain, but the best way to describe it is that it looks like a pattern that you got when you opened a windows file for the first time. In the middle of it you can see different tools that Photoshop CC has, like tools, palettes, and a zoom tool. Some functions like shape tools are hidden on the left side of the trippy looking icon. If you are opening Photoshop on a new computer, you have to install it. Otherwise, you will have to download it from the Adobe Creative Cloud website. If you are having trouble downloading it, try clearing your browser cache or history. Better yet, just download it on your phone and put it on your computer.
